

Robot Framework

Assignment 1: Basic Syntax and Keywords

1. Problem Statement: -

Create a Robot Framework test case to open a web browser and navigate to a specific URL. Use the 'Input Text' keyword to fill in a form field on a webpage. Write a test case to verify the presence of a specific element on a webpage using the 'Page Should Contain Element' keyword.

2. Objective: -

Master basic Robot Framework syntax, test structure, and core SeleniumLibrary keywords.

3. Tools, Software, and Concepts Used: -

Robot Framework, SeleniumLibrary, Python.

4. Source Code / Implementation: -

```
*** Settings ***
Library      SeleniumLibrary

*** Variables ***
${URL}       https://www.saucedemo.com/
${BROWSER}   Chrome

*** Test Cases ***
Basic Web Interaction Test
    [Documentation]    Test opening browser, inputting text, and verifying
elements with manual pauses
    Open Browser      ${URL}      ${BROWSER}
    Maximize Browser Window
    Sleep             3s
    Input Text        id:user-name    standard_user
    Input Text        id:password     secret_sauce
    Sleep             3s
    Page Should Contain Element      id:login-button
    Click Element      id:login-button
    Page Should Contain Element      class:inventory_list
    Sleep             3s
    Close Browser
```

5. Output & Screenshots: -

6. Result, Observation, and Conclusion: -

- Result: The script successfully opened the browser, inputted text, and verified element existence using native keywords.
- Observation: Robot Framework's tabular, keyword-driven syntax abstracts away complex programming concepts, making it highly accessible.
- Conclusion: Built-in libraries like SeleniumLibrary provide out-of-the-box robust commands for web interaction.
